

## PMCRS

PMCRS is a customised software and hardware package developed by Tonkin & Taylor to allow seamless, internet-based access to, and management of, 'virtual' project information.

### Do you have any of the following?

- Mountains of technical data that you need to archive, but need to be able to readily access
- The need to sort data by location, activity, data, person, report, schedule etc
- Long term projects with an extensive data base or reporting history that you need to access
- Multiple levels of data common to a site or project
- Complex monitoring or reporting schedules
- Multiple sources for routine data provision
- Large or complex construction projects with multiple contractor or subcontractor inputs.

If you answered yes to any of these questions you could benefit from PMCRS.

### Key features

- Based on a MOSS (Sharepoint) system, but with powerful graphics and MS Project interfaces
- Intelligent data management and interaction
- Graphic interface allows 'point and click' data retrieval from a GIS, Google Earth or Site Map base.

### The advantages?

- Minimised up-front cost through the use of a hosted system on T&T's server
- Low running cost
- Multiple levels of data entry and access, with security options
- Multiple reporting options
- Access to the full system via any suitable internet link at any location
- Greatly reduced data entry demands for large projects
- 'Point and click' retrieval of data, with other multiple library and search options
- Automated reporting
- Intelligent data interaction for automated alerts, call-ups, reporting, cost and programme management
- System is always current
- Huge scope for individually customised features.

### The results

- Nothing gets lost (even over the very long term)
- All project data is secure, with multiple levels of back-up
- Costs are minimised at all levels
- Data is instantly available - from anywhere.
