

Phyllis Street Reserve, Auckland, NZ

Client

Auckland City Council.

Project

A former landfill on the banks of Oakley Creek was redeveloped to provide a much-needed community reserve. Steep slopes with exposed refuse and unsightly leachate were remediated to provide a safe stream-bank walkway, and a playing field was developed above. Innovative geotechnical and groundwater management solutions were required in a tightly constrained site.

Services provided

- Environmental and geotechnical investigations
- Slope retention design
- Landfill cap design
- Groundwater management design
- Resource consents
- Tender and contract management
- Construction supervision.
