

Jetty, Slipway Repair and Road Construction, Pitcairn Island

Client

British Government.

Project

The landing at Bounty Bay provides the only access to Pitcairn Island and it is a small rocky bay backed by steep cliffs. The only access into the bay has been by a steel sheet pile bulkhead jetty and concrete slipway connected to a steep dirt road. The jetty is exposed to large waves which have corroded the sheet piles below water level. This project involved the repair and strengthening of the jetty, slipway and an upgrade of the road by constructing a concrete surface.

Services provided

- Site investigations and survey
- Assessment of solution options
- Detailed design of jetty, slipway and road
- Tendering the construction contract
- Construction management and observation.
