

Silverstream Landfill, RMA Services, Upper Hutt

Client

Hutt City Council.

Project

This project involved the preparation of resource consent applications for development of Stage 2 of Silverstream landfill. Stage 2 extends the life of the current landfill by approximately 50 years.

The project did not require a resource consent hearing. This is a reflection of the effective consultation and the involvement of Hutt City Council in ensuring the potential effects of the landfill were clearly identified and the proposed mitigation measures satisfied adjoining residents.

There is ongoing involvement with landfill operation ensuring compliance with resource management conditions through undertaking monitoring programmes and preparing environmental management plans for landfill operations.

Services provided

- Management of environmental investigations
- Preparation of AEE and consent application
- Preparation of environmental management plans
- Landfill gas, surface and ground water quality monitoring
- Climate and hydrological monitoring
- Participation in Community Liaison group.
