

Tamugan Hydro Power Project, Philippines

Client

HEDCOR Inc.

Project

A run-of-river hydro power project initially with three schemes, 20 MW, 7.5 MW and 6.5 MW and subsequently changed to two. The original schemes included division weirs, diversion tunnel conveyance (low pressure) pipelines, desanders, pondages, penstocks, surface powerhouses and tailrace channels and switch yards, substation and transmission lines. Access roading is also included in the project.

Services provided

- Geological Investigation and geological and geotechnical models
- Detailed design
- Peer review.
